The video explains the logic of the critical ratio used in newsvendor problems in a very simple manner.

Newsvendor Problem 2 - YouTube problem to find the optimal order quantity. Without any assumptions on the actual form of the utility function of the newsvendor, we extend the current literature on the risk averse newsvendor (who orders less than the risk neutral newsvendor) to the risk seeking case and show that the risk seeking newsvendor orders more than

water

Chapter 7 Review Problems - Saddleback College

The traditional newsvendor problem separated selected players to order as dressed jerseys and remaining demand to order as "blank" jerseys. The second approach, the newsvendor with risk pooling, provides a more flexible inventory plan that satisfies selected player demand using a combination of dressed and blank jerseys.
