It was code-named X100 and it was to be Jaguar's latest sports cars, featuring both coupe and convertible coachwork. It was to have an all-new V8 engine and it was to replace the XJS. It would also ultimately have the most powerful forced-induction engine of any production Jaguar road card and it had a lot riding on its success. It was the XK8 - a sleek, purposeful grand tourer in the Jaguar tradition. Graham Robson, one-time Jaguar apprentice and a motoring historian

Basics of Software Engineering Experimentation is a practical guide to experimentation in a field which has long been underpinned by suppositions, assumptions, speculations and beliefs. It demonstrates to software engineers how Experimental Design and Analysis can be used to validate their beliefs and ideas. The book does not assume its readers have an in-depth knowledge of mathematics, specifying the conceptual essence of the techniques to use in the design and analysis of experiments and keeping the mathematical calculations clear and simple. Basics of Software Engineering Experimentation is practically oriented and is specially written for software engineers, all the examples being based on real and fictitious software engineering experiments.

A renowned Jaguar expert offers a comprehensive historical review of the highly collectable XJS series of coupes, cabriolets and convertibles with particular emphasis on quality evaluation, maintenance and upgrades. Jaguar XJS takes the reader through the 20-year history of a model series which, after a lukewarm reception in 1975 by Jaguar enthusiasts who expected a replacement for the famed E-Type, matured through many evolutions into some of the most stylish cars ever to wear the Jaguar badge, earning along the way an enviable reputation on the international motor racing scene.

It appeared at a time when fuel-thirsty luxury cars were unfashionable. However, Jaguar stuck with the car and the result is a twenty-one year production history and a firm place in the classic jaguar list.
