This book, assembled to describe and illustrate the emerging field of service design, was brought together using exactly the same co-creative and user-centred approaches you can read and learn about inside. The boundaries between products and services are blurring and it is time for a different way of thinking: this is service design thinking. A set of 23 international authors and even more online contributors from the global service design community invested their knowledge, experience and passion together to create this book. It introduces service design thinking in manner accessible to beginners and students, it broadens the knowledge and can act as a resource for experienced design professionals.

Service Design and Delivery provides a comprehensive overview of the increasingly important role played by the service industry. Focusing on the development of different processes employed by service organizations, the book emphasizes management of service in relation to products. It not only explores the complexity of this relationship, but also introduces strategies used in the design and management of service across various sectors, highlighting where tools, techniques and processes applicable to one sector may prove useful in another. The implementation methods introduced in the book also illustrate how and why companies can transform themselves into service organizations. While the book is primarily intended as a text for advanced-level courses in service design and delivery, it also contains theoretical and practical knowledge beneficial to both practitioners in the service sector and those in manufacturing contemplating moving towards service delivery.

Service design is the activity of planning and organizing people, infrastructure, communication and material components of a service in order to improve its quality and the interaction between service provider and customers. It is now a growing field of both practice and academic research. Designing for Service brings together a wide range of international contributors to map the field of service design and identify key issues for practitioners and researchers such as identity, ethics and accountability. Designing for Service aims to problematize the field in order to inform a more critical debate within service design, thereby supporting its development beyond the pure methodological discussions that currently dominate the field. The contributors to this innovative volume consider the practice of service design, ethical challenges designers may encounter, and the new spaces opened up by the advent of modern digital technologies.

Service design is a rapidly growing area of interest in design and business management. There are a lot of books on how to get started, but this is the first book that describes what a 'good' service is, what makes a good service and why. This book lays out the essential principles for building services that work well for users. Demystifying what we mean by a 'good' and 'bad' service and describing the common elements within all services that mean that it either works for users or doesn't. This book is for anyone who is involved in designing or delivering services and aims to give the reader an understanding of what the common characteristics of a 'good service' are to users. For readers who are not professional service designers, this book gives an indication of what they or their teams should be aiming for, without presuming they will invest a significant amount of time designing a service themselves.

A comprehensive introduction to designing services according to the needs of the customer or participants, this book addresses a new and emerging field of design and the disciplines that feed and result from it. Despite its intrinsic multidisciplinary, service design is a new specialization of design in its own right. Responding to the challenges of and providing holistic, creative and innovative solutions to increasingly complex contemporary societies, service design now represents an integrative and advanced culture of design. All over the world new design studios are defining their practice as service design while long established design and innovation consultancies are increasingly embracing service design as a key capacity within their offering. Divided into two parts to allow for specific reader requirements, Service Design starts by focusing on main service design concepts and critical aspects. Part II offers a methodological overview and practical tools for the service design learner, and highlights fundamental capacities the service design student must master. Combined with a number of interviews and case studies from leading service designers, this is a comprehensive, informative exploration of this exciting new area of design.

Designing Service Processes to Unlock Value explores how service processes can be designed to leverage the expanding range of opportunities for service providers and customers to co-create value. The service process design landscape is changing, with many of the previous limitations disappearing on how and by whom services are delivered. Opportunities for new service design configurations are being supported, to a large extent, by technology-enabled innovations; many tasks previously performed by the service provider may now be performed by either the customer or the service provider. As a result, customers are playing a more active role in the service process, not only through self-service but also by providing information to the service provider to create a more personalized service experience. Designing Service Processes to Unlock Value explores how service processes can be designed to leverage the expanding range of opportunities for service providers and customers to co-create value. Readers will learn about frameworks for value co-creation and models for designing all types of service processes, as well as the unique challenges of designing knowledge-intensive services. And with the growing number of alternatives for designing service processes and determining who performs the various service tasks, service performance outcomes are increasingly dependent on the knowledge, skills, and abilities—that is, capabilities—of both service providers and customers. Thus, the book concludes with approaches to unlock these capabilities—and further boost value co-creation.
