The concept of VLSM Subnetting is relatively simple. Select block size for each segment.

VLSM Subnetting Explained with Examples

The subnet 192.168.1.224 /29 with the Mask 255.255.255.248 has exactly 6 valid host IP addresses. So this can be assigned to Management. The last octet of the subnet mask will contain 11111000. By using VLSM, the administrator can subnet the IP subnet in such a way that least number of IP addresses are wasted.

scenario, let's say we have exactly 252 users total and we need to assign 126 users to the 1st subnet, and the other 126 users to the 2nd subnet, this works out perfectly because a subnet mask of 255.255.255.128, as we know, gives us exactly 126 usable addresses per subnet... that's great!... there is no much room for future growth though... hmm.

VLSM and Subnetting

Practice. - BroadcastStormER

A quick way to find out the correct answers is notice that all 255.255.255.x subnet masks will separate these two IP addresses into two separate subnets so we
