How Ancient Ice Proves Climate Change Is Real What We Know About Climate

As we've burned more and more fossil fuels over two centuries, we have added large amounts of carbon dioxide (CO₂) and other heat-trapping greenhouse gases to our atmosphere. Greenhouse gases prevent some heat from escaping the Earth out into space, and while this is a natural phenomenon, human behavior has now added so much greenhouse gas that our atmosphere is keeping in too much heat.

What We Know About Climate Change | MIT Climate Portal

Ice cores drawn from Greenland, Antarctica, and tropical mountain glaciers show that Earth's climate responds to changes in greenhouse gas levels. Ancient evidence can also be found in tree rings, ocean sediments, coral reefs, and layers of sedimentary rocks.

Evidence | Facts □ Climate Change: Vital Signs of the Planet

Based on the evidence, about 97% of climate experts have concluded that human-caused climate change is happening. What We Know helps us understand the science behind the realities, risks and response to the climate challenge.
